## SUMMARY OF TESTING METHODS AND KEY FINDINGS

SolidPractice Real World Testing approach focused on customer involvement in a production environment to ensure that RWT results were as accurate as possible and reflected as clearly as possible how CHERT modules were used in production environments. SolidPractice was not fully deployed in a market environment. We did not have any non-conformities during the testing period. The method used was SQL data queries. The results attained showed interoperability with 3<sup>rd</sup> party interfaces. The results attained also showed SolidPractice had the ability of reporting and extracting the necessary reports. Future usage and adoption will further demonstrate the effectiveness of interoperability.

## Metrics and Outcomes

| Associated Criterion (a)                                                                                                                                                     | Measurement / Metric                                                                                                                                                                                                                                                       | Relied Upon Software | Outcomes                            | Challenges Encountered                                                       |
